EDUCATION

The University of Manchester – Computer Science and Mathematics (BSc Hons) *Sep 2023 - Current*

Predicted Grade – First Class | Year 1 (82%), Year 2 (78%), Industrial Experience.

Notable Modules: DSA, Team Project (HTML/CSS/JavaScript/SQL), SWE (Java), Data Science (Python), Machine Learning, AI & Games, Computational Game Theory, Computer Vision, Graphics & Virtual Environments, Probability, Linear Algebra, Vector Calculus, Differential Equations (MATLAB), Combinatorics & Graph Theory.

Activities: UniCS Computer Science Society Game Development (Unity and C#), Campus League Football.

Beths Grammar School | A-Levels: A*A*A*A*

London | *Sep 2016 - Aug 2023*

WORK EXPERIENCE

Computacenter – Software Developer Industrial Placement

Hatfield | *July 2025 - July 2026*

- Prototyped software and created innovative ways to host software demonstrations for clients with the Solution Center team.
- Led the rebuild of the interactive virtual human designed to showcase the company's AI capabilities, using NVIDIA Riva speech AI services, LLMs with retrieval-augmented generation, the Unreal Engine MetaHuman framework, and containerised deployment with Docker.
- Developed an automated SharePoint site language translation tool using Microsoft Power Automate and Azure Functions (PowerShell), enabling more effective knowledge sharing across 22 international teams.
- Placement scheme ranked 1st in the Higherin Top Medium-Sized Placement Schemes 2026.

The University of Manchester – Mathematics Tutor

Manchester | *March 2024 - March 2025*

- Part-time position providing mentorship and tutoring for A-level Mathematics students, offering guidance to help deepen their understanding of subject material.
- Demonstrated strong leadership skills and responsibility by helping students improve their exam performance, with more than 80% achieving a better grade than predicted.

Transport for London (TfL) – Project Management Work Experience

London | *July 2024*

- Worked with the Critical Infrastructure Delivery (CID) team, gaining an insight into the maintenance of London Underground stations and railway lines, including the use of software tools to simulate timetabled train operations.

ACADEMIC PROJECTS

PseudoCompiler

TypeScript, Node.js, React, Tailwind CSS, Git

- Created a configurable pseudocode editor and interpreter, enabling beginners to explore core programming concepts without the overhead of strict language syntax.
- Engineered a full language pipeline from scratch in TypeScript, including a custom lexer, parser, abstract syntax tree (AST) generation, and interpreter.
- Built an interactive execution environment with real-time input/output, allowing users to write and run pseudocode directly in their browser.

Formula One Strategy Analyser

Python, Jupyter, FastAPI, Node.js, React, Tailwind CSS, Git

- Built a Formula One tyre strategy analysis web application, exposing Python REST APIs backed by historical race and stint data from over 180 Grands Prix, processed using FastF1 and Jupyter.
- Developed a responsive React frontend styled with Tailwind, responsible for visualising race strategies, tyre compounds, and lap-by-lap race events, and containerised the application using Docker for consistent deployment.

Snapbook

Java, Firebase, React, React Native, Git

- Worked collaboratively within a team to design and build a full-stack web and mobile application, featuring an interactive 3D globe that visualises user-submitted scrapbook posts.
- Designed user interfaces using React/React Native and connected to a database using Google Firebase services, while leveraging Git for coordinated version-control and shared code ownership.

Super Mario Bros. C++ Clone

C++, raylib, Git

- Built a 1:1 clone of the first level of Super Mario Bros. in C++, implementing the game loop, physics, core platforming mechanics, collision detection, character and enemy states, sprite animations, and the integration of visual and audio assets.

Pharmacy Forms

Python, Flask, HTML, CSS, JavaScript, Git

- Developed a web-to-email pipeline using Flask, where user data from a HTML form is passed via APIs to backend services to generate auto-populated PDFs for a local pharmacy.

Graphing Calculator

Python, Tkinter

- Developed a graphing calculator using Python, integrating NumPy and the Tkinter GUI library to plot up to 20 equations on a coordinate grid.
